

Fact sheet

# Intertek RiskAware Supplier Quality Insights

Data analytics for optimized supply chain strategies

Helping global equipment purchasing customers minimize the total cost of quality by using data analytics to focus on higher impact quality and safety risks in their supply chain.

intertek  
riskAware

**42,000+**  
suppliers

**2 million+**  
visits to suppliers

**50 million+**  
data items

Intertek's RiskAware solution supports customers' supply chain strategies through real-time analytics and aggregated data, helping to ensure the cost of quality is less than the cost of equipment and operational failure, fabrication rework and project delays.

## Addressing the Total Cost of Quality

Quality and safety risks can be mitigated through robust and proactive supply chain inspection programs, but challenges lie in the enhancement and integration of quality assurance and quality control (QA & QC) activities.

Equipment purchasing customers want inspection programs to be more efficient and cost-effective, and they recognize the importance of Intertek's extensive vendor/supplier performance data.

By proactively using this data to pinpoint areas for increased focus while reducing spend on lower risk areas, Intertek helps customers make informed inspection decisions which optimize their supply chain strategies.

## Why RiskAware

During more than 2 million inspection visits, Intertek, a global leader in vendor surveillance, has accumulated 50 million+ data items, a wealth of information and insights that can be customized into a holistic approach focused on Total Quality Assurance.

The history of Non-Conformance Report rates, inspection and testing results, HSE reports, defect reasons, rectification timing, and other observations on the suppliers that we have visited can be summarized to highlight areas that warrant more or less attention.

Focus areas could include equipment types, supplier locations, component sub-suppliers, countries, and other factors.

intertek  
riskAware

Intertek RiskAware analyses higher risk suppliers, a risk-based approach, minimising risks of defect-related delays optimising quality spend.

- Low Risk
- Medium Risk
- High Risk

RiskAware minimises time on low risk and focuses on data driven, high risk:

- Suppliers
- Assets & Equipment
- Areas where highest NCR risks occur
